

InLine DUO Softener & Carbon Filter System Benefits

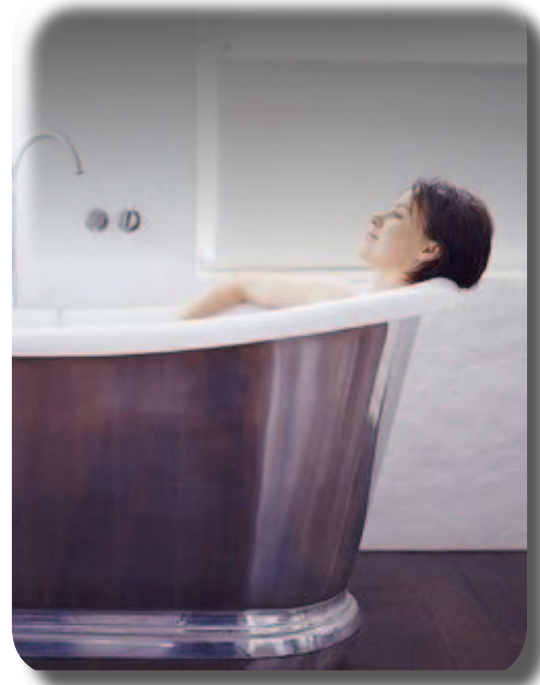

Filters don't soften and softeners don't filter, but with the InLine DUO System you can have the best of both in one container, giving you the necessary treatment your water requires while saving you money and space.

The Duo System is a multi-stage system where water passes through both a resin bed and a carbon bed. The resin bed removes the calcium and magnesium and the carbon takes out many of the impurities that effect odor, taste and improve overall water quality.

With the DUO System your home and family are protected, and a long hot bath will be a luxury you will want to enjoy.

On a properly selected and sized system, you should expect a minimum of three years and likely longer, before the carbon and resin media needs to be replaced. Salt or potassium will need to be added periodically as prescribed by your service professional. The variance in longevity is based on water consumption and the levels of impurities in your water supply.

We recommend having your service provider check your system annually to ensure it is working properly.

Benefits of the InLine DUO Softener & Carbon Filter:

- Reduction or removal of chlorine or chloramine and many associated disinfectant by-products
- Clean, filtered water from every tap
- Better tasting coffee, tea and other water mixed beverages
- Costs savings, reduced environmental impact due to bottle waste associated with plastic bottles and the production process
- Better tasting and smelling water makes drinking water more attractive
- Protection for your home's pipes against chlorine's corrosive effects
- Professional installation and service to back up the product
- Less soap and detergent usage needed
- Improves energy efficiency and life expectancy of water using appliances
- Improves the manageability of hair and helps avoid drying out your skin
- Make your laundry cleaner and fabrics last longer

InLine DUO Softener & Carbon Filter System Features

System Features:

- 12-volt operation uses less than \$2 of electricity per year
 - System software allows a lithium battery to maintain the time of day for up to 8 hours during power outages so all programmed settings and data are maintained
 - Powerful, reliable and user-friendly electronics automatically monitor water treatment functions including:
 - Days since last regeneration
 - Gallons since last regeneration
 - Maximum flow rate for the last seven days
 - Current flow rate
 - Total number of regenerations
 - Noryl™ corrosion-resistant control valve body, internal parts and corrosion-proof tanks for a longer life; all internal components are lead-free
 - Full-flow bypass valve is standard
- Operating parameters: Pressure range 40–100 psi; Temperature range 40°–110° F.

What's in the tank?

The InLine DUO Softener & Carbon Filter contains NSF certified carbon and premium high capacity softening resin. Either CS activated carbon or CX catalytic activated carbon will be used, based on the chemical treatment utilized in your area.

Every InLine Whole House Filter contains a Vortex® plate at the base of the system. This plate increases backwash efficiency by creating tornadic motion and reduces the backflush water usage by up to 50%.

Your contractor will be able to help you understand which chemical or chemicals are used in your area and be able to advise you on the carbon best suited to your needs.
