

InLine Whole House Carbon CS Filter System Benefits

Did you know the water you drink and bathe in may contain as much chlorine as a swimming pool?

Whole house carbon filters are a convenient, cost efficient way to effectively remove or reduce many of the impurities including chemicals, disinfectant by-products and volatile organic compounds commonly found in municipal water supplies.

InLine Whole House Carbon CS Filters are designed for household use and are best suited for chlorine taste and odor reduction.

For a whole house carbon system to work effectively it needs to contain the proper type of carbon based on your water's content. Additionally it needs to be properly sized for the home it's installed in. On a properly selected and sized system, you should expect a minimum of five years and likely much longer, before the media needs to be replaced. The variance in longevity is based on water consumption levels and the levels of impurities in your water supply. Activated carbon beds can be rebbed when the absorption rate of the carbon is exhausted.

We recommend having your service provider check your system annually to ensure it is working properly. Consult your service contractor for applications other than chlorine taste & odor reduction.

Benefits of the InLine Whole House Carbon Filter:

- Reduction or removal of chlorine and associated disinfectant by-products
- Clean, filtered water from every tap
- Better tasting coffee, tea and other water mixed beverages
- Reduced environmental impact due to bottle waste associated with plastic bottles and the production process
- Better tasting and smelling water makes drinking water more attractive
- Your home's pipes will be protected against chlorine's corrosive effects
- Costs saving based on the reduced use of bottled water
- Professional installation and service to back up the product

InLine Whole House Carbon CS Filter System Features

System Features:

- 12-volt operation uses less than \$2 of electricity per year
- System software allows a lithium battery to maintain the time of day for up to 8 hours during power outages so all programmed settings and data are maintained
- Powerful, reliable and user-friendly electronics automatically monitor water treatment functions including:
 - Days since last regeneration
 - Gallons since last regeneration
 - Maximum flow rate for the last seven days
 - Current flow rate
 - Total number of regenerations
- Noryl™ corrosion-resistant control valve body, internal parts and corrosion-proof tanks for a longer life; all internal components are lead-free
- Full-flow bypass valve is standard

Operating parameters: Pressure range 40–100 psi; Temperature range 40°–110° F.

What's in the tank?

The InLine Whole House Carbon CS Filter contains NSF certified high activity granular activated carbon (GAC). This carbon is very effective at the reduction or removal of impurities including chlorine, many associated disinfectant by-products including chloroform and other trihalomethanes (THMs), and many volatile organic compounds such as herbicides, pesticides and industrial solvents.

Every InLine Whole House Filter contains a Vortex® plate at the base of the system. This plate increases backwash efficiency by creating tornadic motion and allows for up to 50% less backflush water usage.

Your contractor will be able to help you understand which chemical or chemicals are used in your area and be able to advise you on the system best suited to your needs.
